1. Seoul's newest and biggest department store, the Hyundai Seoul, is enjoying immense popularity, in what industry insiders hope to be a sign of a revival of consumer sentiment amid the prolonged COVID-19 pandemic. The Hyundai Seoul, which opened at a time when the relentless spread of the novel coronavirus accelerated the migration to e-commerce, has received attention from the media and retail industry insiders. It was the first department store in to open in Seoul in a decade, since Lotte Department Store's Gimpo Airport branch launched in 2011. But the mall's sheer size and with almost half of that space being allocated as rest areas, was what attracted visitors who were looking for a new place to visit.
2. Open access (OA) journals are online journals whose articles are accessible free of charge by anyone. The main difference between OA- and non-OA journals lies in payers for publication charges. Most non-OA journals, or subscription-based journals, require readers to pay for the content that they read. Since individuals or institutions have to pay subscription charges, only those who have purchased a subscription to the journal/have purchased an article will have access to the paper. On the other hand, OA journals typically require authors to pay article-processing charges (APCs) once their paper has been accepted. So readers are not charged and have free online access to the content. Two different business models of publishers are hot topics among researchers.
3. Samsung is starting off the presentation talking about camera design. The cameras are all covered in metal instead of glass for durability and design. Predictably, Samsung is still sticking with the AMOLED edge-to-edge screens with an adaptive screen that goes between 48 and 120 Hz, so it can provide smooth scrolling and game action, but also save battery when you're looking at static content. The S21 also now automatically adjusts its color balance to reduce blue light when it's getting later in the evening. The S21 screen is 6.1 inches, while the Plus goes up to 6.7 inches, which isn't unexpected. The S21 camera array includes a wide-angle main camera, a super-wide camera, and a telephoto zoom lens, which is what you'd expect from a three-camera array. Samsung built a new imaging processor chipset into the device, but didn't provide a ton of information about what it is. The S21's Portrait Mode also works with pets for fancying up your dog photos.

<p>※ 국문으로 번역하시오.</p> <p>4. The ability to link language to the world around us is a crowning feature of our species. For very young infants, it is not yet about learning the meaning of words like "cat" or "dog." Rather, the acoustic signals in speech help foster infants' fundamental cognitive capacities, including the formation of categories of objects, such as cats or dogs. The sounds that activate this key step in development can come not just from human language but also from vocalizations made by nonhuman primates. A new study shows that babies do not use just any natural sound to build cognition, however. While primate calls and human language pass the test, birdsongs do not.</p>
